

TENNIS NETS

CHOOSING THE RIGHT TENNIS NET

HotShot Nets are easy to fit with no tools required and come complete with instructions.

There are 5 factors to consider when choosing your net:

- 1) **Net length** 39.3, 40 or 42 ft
- 2) **Net drop** 3/4 drop or full drop
- 3) **Net mesh** Single or double mesh
- 4) **Top band** Polyester or PVC
- 5) **Post Winder** External or Internal

The following steps will help clarify which net best suits your situation. We are always available for help via email or phone.

Step One: Net Length

Establishing a new court: A standard size court requires a 42 foot (12.8m) net.

Existing court: To establish which length net you require you simply need to measure the distance between your posts. It is important however to measure the distance from the correct place so the net fits snugly against the post, this depends on which winder system you have;

- Internal Winder System: measure the distance from inside post to inside post
- If your tennis posts have the older style External Winder System measure the distance from the end of the winder to the inside hook on the opposite post Nets come in two standard lengths 42 feet(12.8m) and 40 feet (12.2m).

We also stock a TN-F which is 39 ft 3inch. If you have an unusual court measurement our nets can be adjusted to a custom length at an additional charge.

The length of the net cable is 13m (42.65 foot)

Step Two: Net Drop

This choice is personal preference.

Full Drop: Gives the court a professional tournament look.

3/4 Drop: Gives users the practicality of being able to return balls under the net

EXTERNAL WINDER

INTERNAL WINDER

Step Three: Net Mesh

Single Mesh: 1 layer of braided mesh. Perfect for a private court.

Double Mesh: 2 layers of braided mesh on the top 6 rows of the net (where the ball most often hits the net) This aids longevity and is designed with high use courts in mind. (TN-A, TN-C & TN-E)

Netting is made from braided or twisted 2mm - 3mm material.

Step Four: Top Band

Nets with polyester top bands last longer than PVC bands in hot sunny location TN-A, TN-C, TN-E.

We also offer more affordable PVC bands on our TN-D, TN-F & TN-G.

All nets are treated with UV and mildew inhibitors to offer maximum resistance against the elements.

Step Five: Posts Winder

Internal: Full width nets are for use with internal winder posts; our full width models are TN-A, TN-C, and TN-D

External: TN-E, TN-F & TN-G

Tennis net accessories

Accessories and spare parts for posts and nets can be all purchased separately, including replacement winders, cables, top band, adjustable straps and anchor straps.

For more details on each net see our 'Tennis Nets' flyer.
