

Tennis Post Inground | Recommended post installation

GROUND SLEEVE INSTALLATION:

NOTE: Recommended foundation sizing only. Actual foundation depends on local ground conditions.

ORIENTATION GROUND SLEEVE

POST INSTALLATION INSTRUCTION:

- Dimensions of foundations as per Diag <A>.
- Foundations to be situated to provide 12.8m between centre lines of posts for a double court.
- Note that the polyethylene sleeves incorporate built-in tolerance knobs as per Diag . The sleeves should be fitted so that these 2 knobs are positioned on either non-tension side of the net post. Either of the two directions in Diag is correct.
- Leave post in sleeve when fitting to ensure all levels stay correct and keep post in place until concrete has "gone off" or sleeve may creep upwards as concrete dries.
